

REMOTE PTO CONTROL

PART NO: 09943

This control valve will operate a single acting PTO. Each push in fitting has a colour coded cap to ensure correct installation. The control valve is encased in a rigid rubber housing and is fully sealed against normal conditions expected beneath a road vehicle, this allows mounting of the unit in almost any position.

The valve is controlled via a BRITAX rocker switch which illuminates a PTO engaged symbol and a wiring harness that will extend to 5M. The cable can be integrated into the engine management system.

Two M8 threaded bushes allow simple fitting to any convenient part of the chassis. For piped exhaust 1M of 4mm pneumatic pipe is supplied as standard.

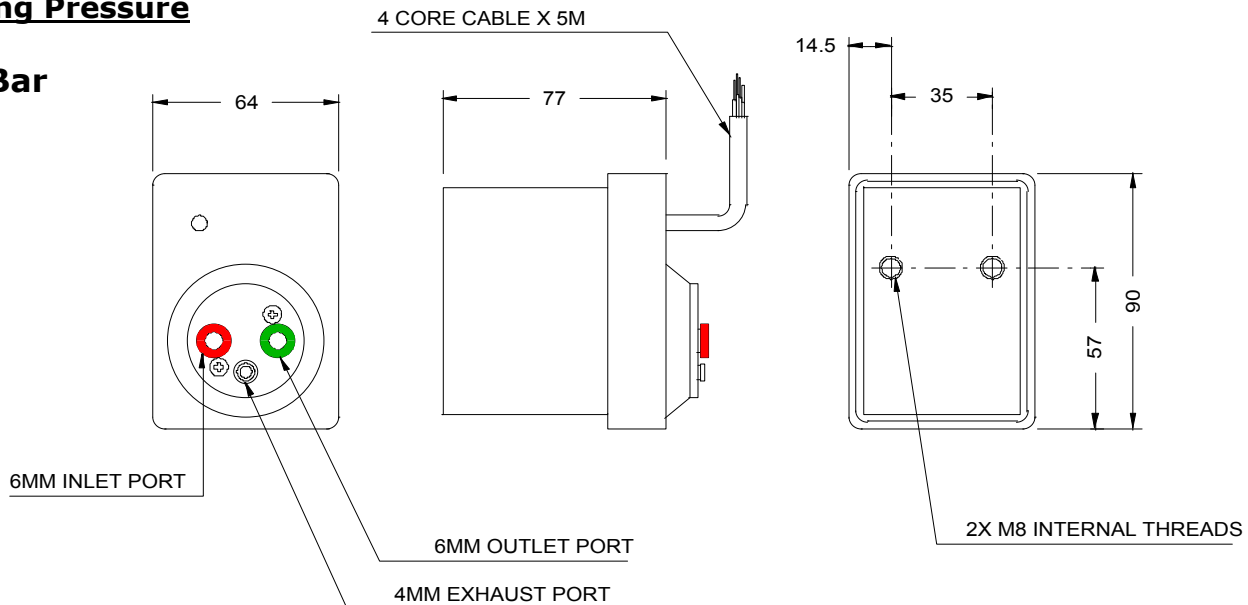

This product is supplied 24V as standard but can be supplied as 12V on request.

REMOTE PTO CONTROL PART NO: 09943

SPECIFICATION

Operating Pressure

1 - 12 Bar
